

Appln. No. 10/646,161
Amendment dated September 27, 2005
Reply to Office Action mailed June 27, 2005

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims (deleted text being struck through and added text being underlined):

1. (Currently Amended) A drive capable of printing a label on a unit of optical media, the drive comprising:

a chassis drive unit;

a transport mechanism coupled to the chassis drive unit, the transport mechanism capable of accepting the unit of optical media and positioning the unit within the drive in an operational position;

a first head coupled to the chassis drive unit, the first head capable of optically communicating with the unit of optical media on a first side thereof; and

a second label printing head coupled to the chassis drive unit, the second label printing head capable of applying a visual label associated with the unit of optical media on a second side thereof;

wherein the first head and the second label printing head are capable of the optically communicating and the applying of the visual label while the unit of optical media is positioned within the drive in the operational position; and

wherein the unit of optical media is capable of being equipped with an electronic labeling device and wherein the second head is capable of communicating with the electronic labeling device when the unit is accepted within the transport mechanism in the operational position.

2. (Original) The drive of claim 1, wherein the first head includes an optical read-only head.

3. (Original) The drive of claim 1, wherein the first head includes an optical read-write head.

Appln. No. 10/646,161
Amendment dated September 27, 2005
Reply to Office Action mailed June 27, 2005

4. (Original) The drive of claim 1, wherein the second label printing head includes a fixed print head.

5. (Original) The drive of claim 1, wherein the second label printing head includes a movable print head.

6. through 9. (Cancelled)

10. (Currently Amended) The drive of claim [[[9]]] 1, wherein the second label printing head is capable of communicating with the electronic labeling device through one or more electrical contacts.

11. (Currently Amended) The drive of claim [[[9]]] 1, wherein the second label printing head is capable of communicating with the electronic labeling device through a wireless interface.

12. (Withdrawn) A circular film capable of being bonded to a unit of optical media, the circular film comprising:

a bonding region; and

an addressable element region coupled to the bonding region, the addressable element region containing one or more addressable elements, the addressable elements capable of being addressed by a head, the addressable elements capable of providing a visual display when addressed.

13. (Withdrawn) The circular film of claim 12, wherein the one or more addressable elements include liquid crystal elements.

14. (Withdrawn) The circular film of claim 12, wherein the one or more addressable elements include one or more contacts and wherein the head includes a contact head and wherein the addressable elements are capable of being addressed by electrical contact between the contact head and the one or more contacts.

Amendment dated September 27, 2005
Reply to Office Action mailed June 27, 2005

15. (Withdrawn) The circular film of claim 12, wherein the one or more addressable elements include one or more wireless receivers associated therewith and wherein the head includes a wireless head and wherein the addressable elements are capable of being addressed through a wireless interface between the wireless head and the one or more wireless receivers.

16. (Withdrawn) An article of manufacture capable of being applied to a unit of optical media comprising:

a circular film including:

a bonding region; and

an addressable element region coupled to the bonding region, the addressable element region containing one or more addressable elements, the addressable elements capable of being addressed by a head, the addressable elements capable of providing a visual display when addressed.

17. (Withdrawn) The article of manufacture of claim 16, wherein the circular film further includes a contact region at an edge thereof, wherein the head includes a contact head, and wherein the one or more addressable elements are addressable through contact with one or more corresponding row contacts and one or more corresponding column contacts in the contact region by the contact head.

18. (Withdrawn) The article of manufacture of claim 16, wherein the head includes a wireless head, and wherein the one or more addressable elements are addressable through a wireless interface with one or more receivers associated with the one or more addressable elements.

19. (Currently Amended) A mechanism capable of printing a label on a unit of optical media, the mechanism comprising:

a first head capable of optically communicating with the unit of optical media on a first side thereof; and

a second label printing head coupled to at least a portion of the first head, the second label printing head capable of applying a visual label associated with the unit of optical media on a second side thereof;

wherein the first head and the second label printing head are capable of the optically communicating and the applying of the visual label while the unit of optical media is positioned within the drive in an operational position;

wherein the unit of optical media is capable of being equipped with an electronic labeling device and wherein the second head is capable of communicating with the electronic labeling device when the unit is in the operational position.

20. (Original) The mechanism of claim 19, wherein the first head includes an optical read-only head.

21. (Original) The mechanism of claim 19, wherein the first head includes an optical read-write head.

22. (Original) The mechanism of claim 19, wherein the second label printing head includes a fixed print head.

23. (Original) The mechanism of claim 19, wherein the second label printing head includes a movable print head.

24. through 27. (Cancelled)

28. (Currently Amended) The mechanism of claim [[[27]]] 19, wherein the second label printing head is capable of communicating with the electronic labeling device through one or more electrical contacts.

Amendment dated September 27, 2005
Reply to Office Action mailed June 27, 2005

29. (Currently Amended) The mechanism of claim [[[27]]] 19, wherein the second label printing head is capable of communicating with the electronic labeling device through a wireless interface.

30. (Currently Amended) A computer system capable of printing a label on a unit of optical media with a single insertion of the unit of optical media within the computer system, the computer system comprising:

a processor; and

an optical drive coupled to the processor, the optical drive further including:

a first head capable of optically communicating with the unit of optical media on a first side thereof; and

a second label printing head coupled to a least a portion of the first head, the second label printing head capable of applying a visual label associated with the unit of optical media on a second side thereof;

wherein the first head and the second label printing head are capable of the optically communicating and the applying of the visual label while the unit of optical media is positioned within the optical drive in an operational position;

wherein the unit of optical media is capable of being equipped with an electronic labeling device and wherein the second head is capable of communicating with the electronic labeling device when the unit is in the operational position.

31. (Original) The computer system of claim 30, wherein the first head includes an optical read-only head.

32. (Original) The computer system of claim 30, wherein the first head includes an optical read-write head.

Appln. No. 10/646,161
Amendment dated September 27, 2005
Reply to Office Action mailed June 27, 2005

33. (Original) The computer system of claim 30, wherein the second label printing head includes a fixed print head.

34. (Original) The computer system of claim 30, wherein the second label printing head includes a movable print head.

35. through 38. (Cancelled)

39. (Currently Amended) The computer system of claim [[[38]]] 30, wherein the second label printing head is capable of communicating with the electronic labeling device through one or more electrical contacts.

40. (Currently Amended) The computer system of claim [[[38]]] 30, wherein the second label printing head is capable of communicating with the electronic labeling device through a wireless interface.
